

IN THE CLAIMS

1 1. (Currently Amended) A collapsible high chair for children, comprising:

2 a seat portion;

3 a backrest pivotally connected to the seat portion;

4 a frame; and

5 an adjusting mechanism which connects the seat portion with the frame;

6 said adjusting mechanism further comprising:

7 a pivotal member which is located on the frame and also connects with the seat
8 portion at a first portion and a second portion of the pivotal member; and

9 a first engaging unit which is located on the seat portion;

10 said first engaging unit further comprising:

11 a sliding piece installed on the seat portion;

12 a plurality of rods slidably engaged with the pivotal member at the first portion,

13 and fixing the seat portion at a predetermined angle relative to the frame

14 when engaged with the pivotal member;

15 wherein the sliding piece cooperates with the rods to allow the rods to be disengaged

16 from the pivotal member when collapsing the high chair and allow the seat portion to

17 pivotaly rotate relative to the frame about the second portion.

1 2. (Previously Presented) The collapsible high chair for children as claimed in claim 1,

2 wherein the rods comprise a first rod secured at the seat portion and at least a second rod

3 movable in the first rod.

1 3. (Currently Amended) The collapsible high chair for children as claimed in claim 2,
2 wherein the first rod passes through the sliding piece and the first engaging unit further has
3 a plurality of connecting elements respectively passing through the sliding piece, the first
4 rod, and the at least second rod to make the sliding piece cooperate with the at least the
5 second rod.

1 4. (Previously Presented) The collapsible high chair for children as claimed in claim 1,
2 wherein both the seat portion and the pivotal member respectively have a collar engaged
3 with each other to serve as a pivot for the seat portion to pivotally rotate.

1 5. (Currently Amended) The collapsible high chair for children as claimed in claim 1,
2 wherein the adjusting mechanism further comprises a second engaging unit situated at the
3 second portion for connecting the seat portion and the pivotal member.

1 6. (Currently Amended) The collapsible high chair for children as claimed in claim 5,
2 wherein the pivotal member further has a collar at the second portion, in which a rib is
3 provided for the second engaging unit to be engaged with.

1 7. (Previously Presented) The collapsible high chair for children as claimed in claim 6,
2 wherein the second engaging unit comprises a cam provided in a collar of the seat portion
3 so as to be engaged with the rib of the pivotal member to prevent the seat portion from
4 being pivotally rotated.

1 8. (Currently Amended) The collapsible high chair for children as claimed in claim 7,

wherein the second engaging unit further comprises a button which is installed in the pivotal member and contacts with the cam, wherein when the button is pressed, the cam is released from the engagement of the rib, and the seat portion is able to pivotally rotated relative to the frame in order to collapse the high chair.

9. (Previously Presented) The collapsible high chair for children as claimed in claim 1 or 5, wherein the high chair further has a tray connected to the seat portion.

10. (Previously Presented) The collapsible high chair for children as claimed in claim 9, wherein the seat portion further has at least an arm and at least a movable piece engaged with each other and at least the movable piece is connected to the tray for adjusting the tray in height.

11. (Previously Presented) The collapsible high chair for children as claimed in claim 10, wherein the movable piece has a bump and the arm has a plurality of slits with different heights for the bump to respectively be engaged into so as to adjust the tray in height.

12. (Previously Presented) The collapsible high chair for children as claimed in claim 9, wherein the backrest can be pivotally rotated relative to the seat portion.

13. (Currently Amended) The collapsible high chair for children as claimed in claim 1, wherein the height of the pivotal member on the frame can be adjusted.

1 14. (New) The collapsible high chair claimed in claim 13, wherein the frame has a plurality
2 of apertures situated at different heights, and the pivotal member is provided with a tenon
3 which is optionally positioned in one of the apertures to adjust the height of the pivotal.
